ElphaPex Technologies Holding Company (hereinafter referred to as 'ElphaPex') reserves the right to make revisions, enhancements, modifications, improvements, and other adjustments to their products and services at any given time, as well as to discontinue any product or service without prior notice.

The entirety of this publication, encompassing both textual content and graphical representations, is the exclusive property of ElphaPex and may not be replicated, reproduced, or utilized in any manner without explicit written authorization from ElphaPex. The information presented in this document is subject to change without advance notice and does not constitute a binding commitment on the part of ElphaPex. While every effort has been made to ensure the accuracy and completeness of the information contained herein, ElphaPex does not guarantee its absolute freedom from errors or omissions. ElphaPex reserves the right to rectify, update, revise, or modify the information contained within this document.

As an assembled product, this publication covers spare parts and instructions from other brands and parameters. The aforementioned rights do not extend beyond the use of product instructions, and all trademarks and registered trademarks mentioned in this publication are the property of their respective owners.

ElphaPex does not provide any express or implied grant of licenses under ElphaPex's patents, copyrights, or other intellectual property rights for the utilization of ElphaPex products or services in any combination, machine, or process. The information provided by ElphaPex regarding third-party products or services does not constitute a license, warranty, or endorsement for their use. The utilization of such information may necessitate a license from the third party, based on their patents or other intellectual property rights, or a license from ElphaPex, based on their patents or other intellectual property rights. ElphaPex assumes no responsibility or liability for assistance with third-party applications. It is the sole responsibility of customers to ensure the appropriate application of ElphaPex components in their products and applications. To mitigate risks associated with customer products and applications, it is advisable for customers to implement adequate design and operational safeguards.

Reselling ElphaPex products or services with statements that deviate from or exceed

the parameters established by ElphaPex for said products or services renders all express and implied warranties associated with the ElphaPex product or service null and void. Such actions are regarded as unfair and deceptive business practices. ElphaPex cannot be held accountable or liable for any such statements.

Kindly note that the entire content aims to elucidate product specifications and parameters. The description content within the text or illustrations may vary depending on the accessory manufacturer, batch, or origin. The content serves solely for illustrative and parameter testing purposes and cannot be considered the sole standard for product evaluation. Customers should fully comprehend that parameters or indicators that do not impact the expected benefits of the product may exhibit slight deviations due to production conditions and tolerances.

ElphaPex warrants the performance of their products in accordance with the applicable specifications at the time of sale, as stipulated by their standard warranty. ElphaPex employs testing and other quality control techniques as deemed necessary to support this warranty. However, it should be noted that not all parameters of each product are necessarily tested, unless mandated by government requirements or local mandatory regulations.

Customers are advised to obtain the most up-to-date and comprehensive information and ensure its currency and completeness prior to placing orders. The sale of all products is governed by ElphaPex's terms and conditions of sale, which are provided upon order acknowledgment.

ElphaPex

1. Overview

The DG Hydro 1 Server uses the script algorithm, with a typical hash rate of 20Gh/s and a power consumption of 6200W. This server adopts an all-in-one form factor, integrating the hash board, power supply, etc. into one box, including a water inlet pipe and a water outlet pipe. All DG Hydro 1 Servers are tested and configured prior

to shipping to ensure easy set up.

1.1 Server Components

Controller Board Interface:

Power Supply Interface:

Notes:

- The power supply of the FP-201 is quite large, in order to avoid excessive cable current, the FP-201 adopts high-load power cord and socket.

Water cooling inlet and outlet:

Notes:

- Please take sealing measures for the water inlet and outlet of the water cooler to prevent water leakage from damaging the equipment.

1.2 Specifications

Product Overview	Value
Version	1.0.0

Model	DG Hydro 1
Crypto Algorithm/Coins	Scrypt
Hashrate, MH/s	20000 ± 3%
power on wall @25°C, Watt	6200 ± 10%
power efficiency on wall @25°C, J/MH	0.31 ± 10%

Detailed Parameters		Value
Power Supply		
PSU	AC380V~480V, 3W+ ground, input 10kw	
Hardware Configuration		
Network connection mode	RJ45 Ethernet 10/100M	
Server Size (Length*Width*Height, w/o package), mm	656*447*86	
Server Size (Length*Width*Height, with package), mm	760*590*245	
Net weight, kg	25	
Gross weight, kg	26.5	
Environment Requirements		
Coolant demand per machine	About 1L	
Inlet water temperature, °C	Normal Mode	20-50
	Overclocking Mode	20-40
Water flow, L/min	≥10	

Water pressure, bar	≤3.5
Liquid medium	Deionized water/Customized water
Liquid, PH	8.5~9.5
Storage temperature, °C	-40~70
Operation humidity(non-condensing), RH	10~90%
Operation altitude, m	≤2000

Important Warning notes:

- ***Caution: Wrong input voltage or wrong 3-phase power cable may cause equipment damaged**
- Inlet temperature control should be within accuracy **±2°C**
- Flow control accuracy should be within **± 10%**
- 10L/min corresponds to the temperature difference between inlet and outlet water close to 8°C@normal mode and 12°C@high performance mode
- When the pressure is more than 4 bar, the water-cooled plate will be deformed and cause the risk of coolant.
- Liquid medium - Special coolant: pure water + special corrosion inhibitor + antifreeze (ratio could be according to the freezing point). The coolant must meet the requirements by Elphapex. The coolant needs to be tested regularly. Testing indicators and testing cycles should be checked with Elphapex. When the testing data exceeds or is lower than the testing indicators, its performance will not meet the requirements and the coolant must be replaced. It is recommended to replace the coolant every year.
- Please empty the liquid in the equipment during storage and transportation.

2. ElphaPexTool Guide

Note: You can **SKIP** this step if you already know its IP address and can use website to configure the mining info.

1. Get software pack **ElphaPexTool** from www.elphapex.com

Notes:

- **ElphaPexTool is now only available on windows platforms.**
- Please use the latest version. New features are only available on the latest version of tools and firmware.

2. Extract the file.

3. Open the software **ElphaPexTool.exe** and click on **[+]** , Add the corresponding network segment range

4. Press the **Scan** button.

The information about servers in the current network segment is displayed in a list.

5. Double-click the selected line, this will open the browser to the server's web page.

6. Proceed to login using **root** for both the username and password.

7. In the **IP** section, you can assign a Static IP address (optional).

8. Enter the IP address, Subnet mask, gateway and DNS Server.

9. Click **SAVE** button.

Network Information

MAC
08:4c:87:e1:a0:47

IP
192.168.0.210

Subnet Mask

3. Server Configuration

3.1 Pool Configuration

1. Enter server web page, click **Miner** Section:

Pool Setting

Mining Address	User Name	User Password
Mining Address	User Name	User Password
Mining Address	User Name	User Password

SAVE

Notes:

- Note that please **DO NOT** adjust the fan speed by yourself although it can be configured. The server itself will tune the fan speed automatically going along with the environment temperature changes.

2. Set the options according to the following table:

Option	Description
Mining Address	Enter your pool address
User Name	Your worker ID on the selected pool.
User Password	The password for your selected worker.

Notes:

- The DG Hydro 1 server can set up three mining pools(pool 1 to pool 3) at the same time.
 - The priority of pools 1 through 3 is reduced in turn, and when a pool with a higher priority is offline, a pool with a lower priority will be put into use
3. Click **SAVE** after the configuration.

4. Server Monitoring

1. Click dashboard to check the server status

Notes:

- When the temperature of the outlet reaches 85 °C, the temperature control policy of the DG Hydro 1 server will activate the high temperature protection and the mining process will stop
2. Monitor your server according to the descriptions in the following table:

Option	Description
chipNum	Number of chips detected in the chain.
Frequency	ASIC frequency.
rate	Network level hash rate of each hash board (MH/s).

theoryHash	Theoretical hash rate of each hash board (MH/s).
hashrate	Board level hash rate of each hash board (MH/s).
picTem	Onboard Temperature of each hash board(inlet/outlet) (°C).
chipState	Chip operating state • Normal • Abnormal
SN	Series Number of each hash board

5. Server Management

5.1 Overclocking Configuration

The **DG Hydro 1 Server** has been adapted to the overclocking mode. You need to switch from normal work mode to overclocking work mode through the latest **AlphaPexTool**. Refer to the following steps.

1. Use latest **AlphaPexTool** to scan to the server.

The screenshot shows the AlphaPexTool interface with various configuration options and a table of server data. The interface includes tabs for IPRange, Autoimport, Scan, CancelScan, CancelMon, ConfigAll, ConfigSel, RebootAll, RebootSel, FWUpgrade, Export, Settings, RemoteCtrl, BindIP, and Language. The main area displays a progress bar for a scan (100% Scan done, total:1, normal:1) and several configuration fields for Pool1, Pool2, and Pool3, including SubAccount, Password, and PoolPostFic. Below these are checkboxes for SuccessMinersOnly, NTP Server, and Work Mode (Normal, PowerSave, Sleep, OverClock). A summary section shows UpgradeSuccess, ConfigSuccess, TotalHash, StateNormal, TempAbnormal, HashAbnormal, UpgradeFail, ConfigFail, AverageHash, StateAbnormal, and FanAbnormal. At the bottom, a table lists server details for IP 192.168.0.210.

All	IP	Status	Model	WorkMode	RealRate	AvgRate	Power	TempMax	TempPCB1	TempPCB2	TempPCB3	TempPCB4	FanRPM	FanRPMMin1	FanRPMMin2	FanRPMOut1	FanRPMOut2
1	192.168.0.210	Normal	DG-Hydro1	Normal	20745.68	21313.59	6916	53	46/53	46/48	46/53	46/48	Normal	0	0	0	0

2. Follow the steps below to switch the server to overclocking mode.

3. Rescan the server status to check whether the working mode has been switched to overclocking mode.

4. If you want to switch to normal mode, refer to step 2, and select **Normal** work mode.

5.2 Firmware Version Check

1. Enter the backstage web site of your server, find the firmware version on the bottom.
2. Firmware version displays the current release version your server uses. In the examples below, the server is using firmware version: **DG-Hydro1_V1.0.0**

5.3 System Update

Notes:

- During the firmware upgrade, ensure that the server remains powered on and no other operations are conducted.

- The DG Hydro 1 server provides support for firmware upgrades using the .img and .zip file extensions.

1. In Web site page, click **Update** to enter the firmware upgrade page.
2. Click **Firmware File** input field, select the .img or .zip firmware file, and then click **UPDATE**, The server will start the firmware update process.

3. When the update process is completed, the server will restart and it will turn to the **Dashboard** page.

5.4 Password Change

1. In Web site page, click **Password**.
2. Enter the current password and the new password, then click **SAVE**.

5.5 Restoring Initial Settings

Notes:

- The **RESTORE** operation will clear the pool Settings and restore the original password. Exercise caution when performing this operation.

1. In Web site page, Click **RESTORE** button.

Regulations:

Notice:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1). This device may not cause harmful interference.
- (2). This device must accept any interference received, including interference that may cause undesired operation.

CAN ICES-003(A) / NMB-003(A)

Note:

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
